## BDA COMMERCIAL

We put the bank in your store

### ENHANCING BUSINESS EFFICIENCY

The self-service Bulk Deposit Acceptor (BDA) is ideal for businesses that accept large volumes of cash and coins.

The device is an ideal solution for wholesale distribution hubs like mass bakeries, depots, dairies and general bulk goods distributors. Drivers can deposit cash receipts directly into the BDA and reference accordingly to customer payments collected on their routes.

The solution is at least 6 times faster than a manual counting process and removes the need for the manual preparation of bank deposits.

The BDA takes up much less floor space than traditional cashier offices and does away with the need for duplicate counts, checks and balances and eliminates human error.

### BENEFITS OF THE BDA

#### SAVE TIME

- Fast, efficient and secure cash depositing.
- Large amounts of notes and coins are deposited simultaneously in seconds.
- Substantially reduces cashier-based deposit counting and processing time.
- Meaningfully reduces depositor queueing and deposit transaction time.
- Reduce the number of hands involved in counting cash.
- Eliminate human error.

#### ROBUST & SECURE

At the core of the Bulk Deposit Acceptor is a cash vault built to SABS Category 4 standards, capable of withstanding the most determined attacks. You can rest assured that cash on site is safe and secure.

#### SAVE MONEY

Retailers and distribution centres enjoy an automated cash management solution that transfers the risk from the retailer to Cash Connect from the moment the cash enters the vault and provides fast cash settlements.

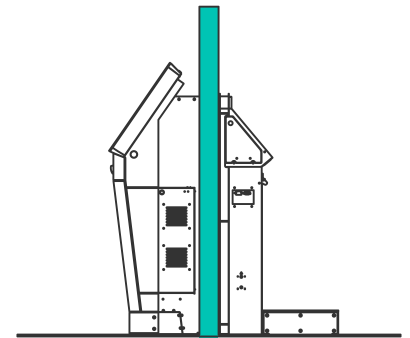

Our secure biometric identification system reinforces accountability and eliminates cash shrinkage. We can reduce your cash deposit bank fees and optimise the cost of handling cash.
